

Chapter 2 Elements of Decision Problems

Making Hard Decisions

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 1 of 19 COPYRIGHT © 2006 by GWU

Introduction

Given a complicated problem, how should one begin?

Critical Step – Identify the elements:

- 1. Values and objectives
- 2. Decisions to make
- 3. Uncertain Events
- 4. Consequences

All four will be addressed in more detail separately.

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 2 of 19 COPYRIGHT © 2006 by GWU

1.OBJECTIVES:

A specific thing one wants to achieve:

- To harvest successfully Farmer.
- To resolve a specific scientific problem Scientist.
- To make a lot of money Investor.

Person's Values: Collection of objectives

Special Objective: Making Money; often a surrogate objective (or means objective) for other objectives e.g. eating, traveling, afford clothing, etc

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 3 of 19 COPYRIGHT © 2006 by GWU

Values and Objectives

Underlying Objectives: Understanding the underlying Objectives (or fundamental objectives) is crucial to formulating the decision problem and list alternatives.

Example: Objective: Travel comfortably from Point A to B

Alternatives: Public Transportation, Lease a Car, Buy a Car, Buy a Motorcycle

Really two objectives: Traveling from A to B and Traveling Comfortably

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 4 of 19 COPYRIGHT © 2006 by GWU Often a trade off has to be made between "money making" objective and other fundamental objectives:

- 1. How much more money are you willing to spend on air conditioning for your car?
- 2. How much more money are you willing to spend on a different color?
- 3. How much more money are you willing to spend to buy a reliable brand?

DECISION CONTEXT =

The setting in which a decision occurs

Person Value's = Collection of All Objectives

Decision Context activates only subset of objectives.

Example: Travel comfortably from Point A to B

If decision context changes from solely **personal use** to also **business use** other objectives or alternatives may have to be activated.

- The type of car may need to be representative of the position you hold in the company (perhaps we need to consider the Lincoln Town Car with chauffeur in that case)
- Instead of buying a car we may want to lease a car for a three year term (better for tax write-off?)

Draft: Version 1

As a large-scale manufacturer of sophisticated aircraft, **Boeing** needs computing power for task ranging from accounting and word processing to computer-aided design, inventory control and tracking, and manufacturing support. When the company's engineering department needed to expand its computing capacity by purchasing a supercomputer, the managers faced a huge task of assembling and evaluation massive amounts of information. There were system requirements and legal issues to consider, as well as price and variety of management issues

Source: D. Barnhart (1993) "Decision Analysis Software Helps Boeing Select Supercomputer." OR/MS Today, 62-63

Boeing's Supercomputer

Super Computer Objectives

Price

Five-Year CostsCost of Improved performance

Performance

- Speed
- •Throughput
- •Memory Size
- •Disk Size
- On-Site
- performance

User Needs

- Installation Date
- •Rollin/Roll out
- •Ease of Use
- Software
- Compatibility
- •Mean Time to Failure

Operational Needs

- •Square Footage
- •Water Cooling
- Operator Tools
- Telecommunications
- Vendor Support

Management Issues

- Vendor Health
- US Ownership
- Commitment to
- supercomputer

Decisions to Make

Most decisions call for: The Immediate Decision

- Go, No Go
- Accept bet or not
- Invest amount of money may vary in range of values

Look at all possible decision alternatives: **Be Creative!**

- Do nothing
- Wait for information and decide later on
- Execute Hedging

Decision may be of a sequential nature:

Future decisions may need to be taken into account when making immediate decision

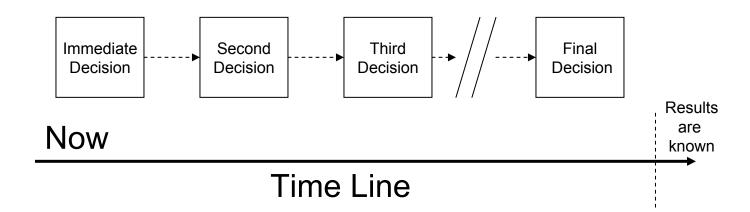

Slide 9 of 19 COPYRIGHT © 2006 by GWU

Decisions to Make

Future decisions may depend on:

- Past Decisions
- Past Events
- Both

List of possible decisions is important, but more important is the order in which they occur.

Consecutive decisions can be the same, but may differ.

Making Hard Decisions R. T. Clemen, T. Reilly Chapter 2 – Elements of Decision Problems

Slide 10 of 19 COPYRIGHT © 2006 by GWU

Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/

Many decisions (if not all) are made under the presence of uncertainty:

•Investment decision: Will stock of company go up or not?

- Camping decision: Will the weather be good or not?
- •Mutual fund decision: Will entire stock market go up?

A decisions problem becomes more complicated when the number of relevant uncertain events increases.

Nature of Uncertain Events:

Outcomes are measured in distinct classes (Discrete)
Outcomes may fall in a range of values (Continuous)
Interdependence between different uncertain events

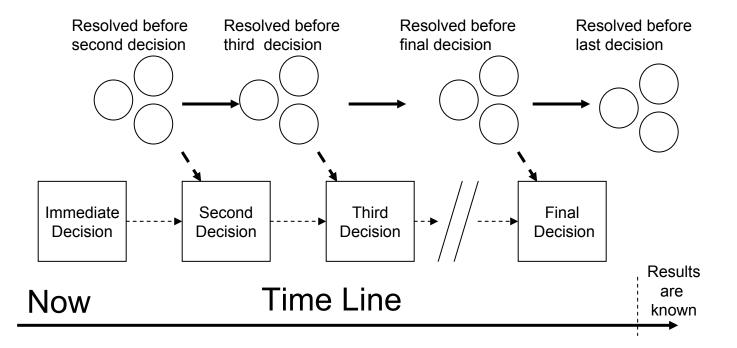

Making Hard Decisions R. T. Clemen, T. Reilly Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 11 of 19 COPYRIGHT © 2006 by GWU

Uncertain Events

The time sequence of uncertain events related to the sequence of decision is important. Why?

- •Tells you what information becomes known **before** a decision has to be made
- •Uncertain events may be **unknown** at the time of the immediate decision, but may be **known** by subsequent decisions

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems

Slide 12 of 19 COPYRIGHT © 2006 by GWU

Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/

Evaluation of Outcomes:

- Profit Measured in # Dollars
- Casualties Measured in # Deaths
- Environmental Damage Measured in # Polluted Soil
- Health Risk Measured in # Infected People

Trade off between has to be made in almost any decision problem

 Profit, Casualties, Environmental Damage, Health Risk – Single measure modeling trade-off needs to be developed: Measured in # Utils.

This is the topic of multivariate attribute utlilty theory. Discussed in Chapters 13-16

Making Hard Decisions R. T. Clemen, T. Reilly Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 13 of 19 COPYRIGHT © 2006 by GWU

Planning Horizon =

Time when decision maker finds out the results

For requisite decision models:

Stop when future decisions and future uncertain events are not essential to **the immediate decision**.

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 14 of 19 COPYRIGHT © 2006 by GWU

\$100 @ 10% annual interest now = \$110 one year later \$110 @ 10% annual interest now = \$121 one year later or \$100 @ 10% annual interest now = \$121 two years later

PV(X) = Present value of dollar amount x R% = Interest during the period $FV_n(X)$ = Future value after n periods

$$FV_n(X) = (1 + \frac{R}{100})^n * PV(X)$$

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 15 of 19 COPYRIGHT © 2006 by GWU

At immediate decision:

Future values must be converted to present values

$$PV(X) = \frac{FV_n(X)}{(1 + \frac{R}{100})^n}$$

Note difference between:

- 1. 10% Annual Interest Rate
- 2. 10% Annual Interest Rate compounded monthly

\$100 @10% Annual Interest = \$110 dollars after one year \$100 @ 10/12% Monthly Interest over 12 periods =

$$\left(1 + \frac{10}{12 \times 100}\right)^{12} \times \$100 = \$110.47$$

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/

Slide 16 of 19 COPYRIGHT © 2006 by GWU

Stream of cash flows

\$425 in savings @ 10% annual interest

Pay \$425 and receive \$110, \$121, \$133.10 \$146.41 after 1st, 2nd, 3rd, 4th year respectively

What is the preferred alternative?

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 17 of 19 COPYRIGHT © 2006 by GWU

Year	Future Value	Present Value
1	\$110	\$110/1.1
2	\$121	$\$121/(1.1)^2 = \100
3	\$133.10	$\$133.10/(1.1)^2 = \100
4	\$146.41	$\$146.41/(1.1)^2 = \100
Total	\$510.41	\$400

 X_k = Cost/revenue at the end of period k

$$NPV(X_0, X_1, \dots X_n) = \sum_{k=0}^n \frac{X_k}{\left(1 + \frac{R}{100}\right)^k}$$

R% = Same interest rate over **all n periods**

R. T. Clemen, T. Reilly

Chapter 2 – Elements of Decision Problems Lecture Notes by: J.R. van Dorp and T.A. Mazzuchi http://www.seas.gwu.edu/~dorpjr/ Slide 18 of 19 COPYRIGHT © 2006 by GWU

Note:

 $X_k = \text{negative} \Leftrightarrow X_k \text{ is cost } X_k = \text{positive} \Leftrightarrow X_k \text{ is revenue}$

What if the interest rate changes per period?

 R_k % = Interest Rate during period k

$$NPV(X_0, X_1, \dots X_n) = \sum_{k=0}^n \frac{X_k}{\prod_{j=0}^k \left(1 + \frac{R_j}{100}\right)^j}$$

R. T. Clemen, T. Reilly
