Linked Senior, the leading provider of resident engagement software for the long term care market, is seeking a talented individual to work on various parts of our engagement platform. We're looking for a highly skilled full-stack developer, who is also a disciplined self-starter capable of working in a fast paced, agile team environment. You must be exceedingly confident in your work and have a passion for designing and building quality software. Additionally, we’re looking for an engineer that embodies our culture and core values of integrity, customer experience, teamwork, determination, fun, and changing the world!

Required Skills and Experience:
- Excellent programming skills with Java, Object-Oriented analysis and design.
- Familiarity with typical J2EE stack (Apache, JSP, JSF, Spring MVC, AJAX)
- Strong SQL skills and familiarity with MySql.
- Familiarity with Spring 3.x
- Proficiency with source management (e.g. Subversion, GIT).
- Strong familiarity with any of the build technologies - Apache Ivy, Maven, Ant, Gradle
- Good knowledge of software development principles and design patterns.

Desired Skills
- Experience with Groovy or the Grails framework
- Experience with the Seam framework and JBoss
- Familiarity with Amazon Web Services (EC2, RDB, S3, Beanstalk)
- Experience with NoSQL databases (Cassandra, MongoDB, ElasticSearch)
- Experience with HL7, ADT, HIPPA, MDS.
- Experience with IOS or Android
- Familiarity with Continuous Integration servers (e.g. Hudson/Jenkins)
- Familiarity with Atlassian tools (Jira, Bamboo, Bitbucket)

Personal Qualifications
- Self-motivated, quick learner, detail oriented and well organized.
- Independent problem solver with superior technical, analytical and troubleshooting skills.
- Ability to work independently and efficiently in small teams with minimum supervision.
- Proven ability to learn new technologies and software quickly.
- Comfortable in fast-paced, start-up environments.
- Bachelor in Computer Science or Masters in Computer Science preferred.
