

## Alice: Beyond the Basics

Steve Cooper  
Michelle Venable-Foster  
Barbara Ericson  
May 2007

1

## Center of an object

- An object is positioned in the world around its center.
- The center of an object can be:
  - At the center of its mass, or
  - Where it stands on the ground, or
  - Where it is held or connected (a hinge joint)

AliceBeyondBasics

2

## Motion

- Motion of an object is relative to
  - its orientation
  - its center

AliceBeyondBasics

3

## Translational Motion

- Change of position of the entire object in the world
- The **direction** of translational motion is stated relative to the orientation of the object.
  - Objects are *ego-centric*, motion based on orientation of the object
  - Six possible directions
    - move
      - left
      - right
      - up
      - down
      - forward
      - backward

AliceBeyondBasics

4

## Rotational Motion

- Rotational motion occurs around the *center (pivot point)* of the object or subpart of the object.
- Directions are divided among two instructions:
  - turn
    - forward, backward
    - left, right
  - roll
    - left, right
- **No up and down directions!**

AliceBeyondBasics

5

## Demo

- Rotational Motion
  - Note that the movement is around the center of the object.
  - turn
    - forward orientation changes
  - roll
    - forward orientation remains the same

AliceBeyondBasics

6

## Aeronautical Terminology

- **Pitch**: turn forward or backward – rotation is like a hinged lid on a box
- **Yaw**: turn left and right – rotation is like a door on hinges
- **Roll** (a.k.a. **Bank**); roll left or right – rotation is like a doorknob

AliceBeyondBasics

7

## Customize Your Objects!

- All of the objects in Alice have properties that can be changed.
- For example, I can change my cow's color to red!

AliceBeyondBasics

8

## Posing an Object

- You can move just a part of an object
  - Click affect subparts box under mouse controls
- Select a part to move with the mouse
  - Mouse controls will affect just that part
- Or use the object tree
  - To pick the part to move

AliceBeyondBasics

9

## Posing an Object using the Menu

- You can also use a popup menu to pose an object
  - Right click on an object in the object tree to bring up the methods
    - Select a method to execute it
    - Click on the Undo button to undo this action

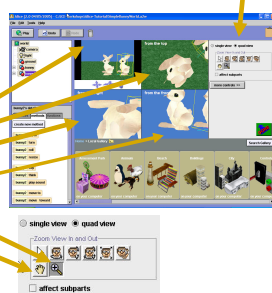

AliceBeyondBasics

10

## Quad View

Click here to see Quad View

- Use the Quad View to get multiple views of your objects
  - Normal camera view
  - From the top
  - From the right
  - From the front
- Can zoom
- And move the view

AliceBeyondBasics

11

## Camera Controls

- Use camera controls to change the starting camera view
  - Move up, down, left, right
  - Drive forwards, backwards, rotate left, rotate right
  - Tilt (rotate) camera forwards or backwards

AliceBeyondBasics

12

## Change the speed of a command

- You can click on the down arrow next to a command
  - And select duration
  - And change how long it takes to do that command
- You can also change the style of the animation
  - Also by clicking on the down arrow

AliceBeyondBasics

13

## Saving a World

- Click on File and Save World
- Tell it where you want to save it
  - Give it a name
- To open a saved world
  - Click on File, Open World
    - Pick the saved world

AliceBeyondBasics

14

## Creating People

- You can use the she builder and he builder to build custom people
  - In the people category
  - Control the skin color, hair, eyes, body, and clothes

AliceBeyondBasics

15

## Challenge

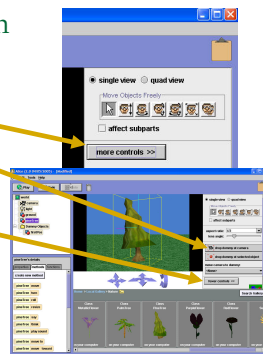

- Create several objects of a class and pose them so that they look different
  - Also change some of the properties of the objects
    - Like color
- Create a custom person and add it to your world
- Save your finished world

AliceBeyondBasics

16

## Saving a Position

- Click the more controls button
- Drop a dummy
  - At the camera
  - Or at an object
- Can move the camera to a dummy
- Can set an object to the dummy's position

AliceBeyondBasics

17

## Adding Sounds!

- Most of the objects in Alice have the ability to play a sound!
- Locate the method that says object.playSound
- You can either play one of the sounds in the Alice library or import one of your own!

```
bunny.playSound( sound );
```

AliceBeyondBasics

18

## Importing Sounds!

- Using the drop-down menu, select Import Sound.
- Navigate to the sound file on your computer that you'd like to use.
- You can only use **.wav** or **.mp3** audio files in Alice animations.

AliceBeyondBasics

19

## Recording Sounds!

- You can record your own sounds to use in Alice by selecting **record new sound** in the drop-down menu.
- Give your sound file a name, so you will be able to find it later.
- When you're ready, press the **record** button and speak into the microphone!

AliceBeyondBasics

20

## Background Music!

- If you'd like to have a soundtrack play for the duration of your animation, you will have to **create new event**, and select **When the world starts**.
- You can attach the method to any object that is in your world. Even the ground can play your background music!
- Finally, import the **.wav** or **.mp3** file you'd like to play!

AliceBeyondBasics

21

## Add 3-D Text

- You can add a title for your animation by using the 3-D text object.
- Add an object to your world, and scroll to Create 3-D Text in the local gallery.

AliceBeyondBasics

22

## Add 3-D Text

- Type in your text; choose your font and size.
- Once the text is on the screen, you can use the Properties tab to change the color of the text.
- You can also use the tools to position your text in your movie.

AliceBeyondBasics

23

## Making Your 3-D Text Disappear

- You will probably want to use the text as a title screen, so you'll want to fade the title out after an amount of time.
- There are two ways you can do this – by changing the **isShowing** property or by changing the **opacity** property
  - use a duration to get it to fade out

AliceBeyondBasics

24

## Challenge

- Add a title screen to your movie
  - And make the 3d text fade out over 2 seconds
- Add at least one sound to your movie
- Add a soundtrack to your movie
- Have at least one camera move

AliceBeyondBasics

25

## What can you teach with Alice?

- Basics of Object-Oriented Programming
  - Objects and Classes
  - Methods and Parameters
  - Inheritance
    - Alice doesn't fully support inheritance
  - Iteration (looping)
  - Conditionals
  - Recursion
  - Lists and list processing
  - Arrays
  - Algorithm design, implementation, and testing
- Basics of Event-driven programming

AliceBeyondBasics

26

## Alice Tutorials

- Click on File then Open World
  - And then click on a tutorial to run
- Click on the Tutorial tab
  - When you finish with one tutorial do the next the same way

AliceBeyondBasics

27
